

Latihan SQL 3-1

Open the northwind database and get a query window for that database. Make sure you are in the right database by looking at the text at the top of the query window.

Run the following queries.

1. What is the number of products for each category (do it with joins)
2. Total value of each product sold for year of 1997
3. Customers that have bought more than \$5000 of products
4. Customers that have bought more than \$5000 of products with order date in first six month of the year of 1997 (see the effect of WHERE clause)
