

### Latihan SQL 3-2

Open the northwind database and get a query window for that database. Make sure you are in the right database by looking at the text at the top of the query window.

Run the following queries.

1. Distinct countries of all our customers and suppliers in alphabetical order
2. All list of countries of our suppliers and customers, with a record for each one
3. Find the number of customer and supplier pairs that are in the same country
4. Cities that have a supplier with no customer
5. How many customers do we have in cities without suppliers
