

### Latihan SQL 3-3

Open the northwind database and get a query window for that database. Make sure you are in the right database by looking at the text at the top of the query window.

Run the following queries.

1. How do you find customers who didn't have an order in April, 1997
2. Find all suppliers that have had an order with 1 item
3. Find all distinct customers that ordered more in one item than the average order amount per item of all customers
4. Find all suppliers that are in the same city as a customer
