

## Latihan SQL 2-2

Open the AdventureWorks database and get a query window for that database. Make sure you are in the right database by looking at the text at the top of the query window.

Run the following queries.

1. Find all the salesorderdetail records to productid 799 and order them by largest orderqty to smallest
2. What is the largest discount percentage offered in the specialoffer table
3. Find the sum of scrappedqty from the workorder table for productid 529
4. Find all vendor names that with a name that starts with letter G
5. Search the person table for every firstname that has t as a second letter
6. Return the first 20 records from emailaddress table
7. How many person records have an additionalcontactinfo field that has a value
