

Latihan SQL 4

Open the northwind database and get a query window for that database. Make sure you are in the right database by looking at the text at the top of the query window.

Run the following queries.

1. On orders create a single index on two fields customerid and orderid
2. Drop idx_orders_customerid_orderid index on orders table
3. Create a table for returns (should have id for the record, customerid, date returned, productid, quantity and orderid).
4. On returns table rename returndate to return_date
5. Rename returns table to bad_orders
6. On bad_orders table add a text field called reason
7. On bad_orders table remove reason field
8. On bad_orders table changes the quantity field to int
9. Drop the bad_orders table
