CRUD & Users Services

Today's Project

Today we will create a news aggregator app that allows a multi-user and has login form. In our news aggregator app, we will learn CRUD operations (Create, Read, Update and Delete)

*News aggregators pull together, and allow you to assemble, news from a variety of sources in one place. Some examples: Line Today, Babe

Database

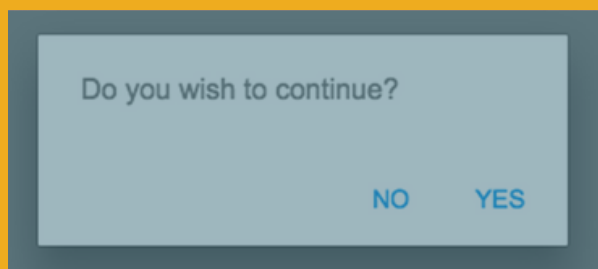

We'll use Data Tables to store our news articles. We already learned about Data Tables in the previous course. We'll have 2 tables:

- Articles table
- Categories table

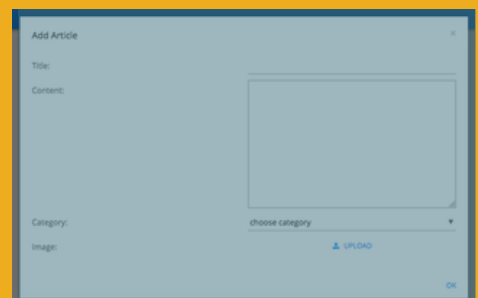

CRUD Operations – Create

The 'Create' part in our CRUD APP will be adding news articles that user enters and save it into the database. The form where users put the articles will be in the form of a popup box. We can create it using alert.

Example:

Simple Art

A Custommized popup box using alert

CRUD Operations – Read

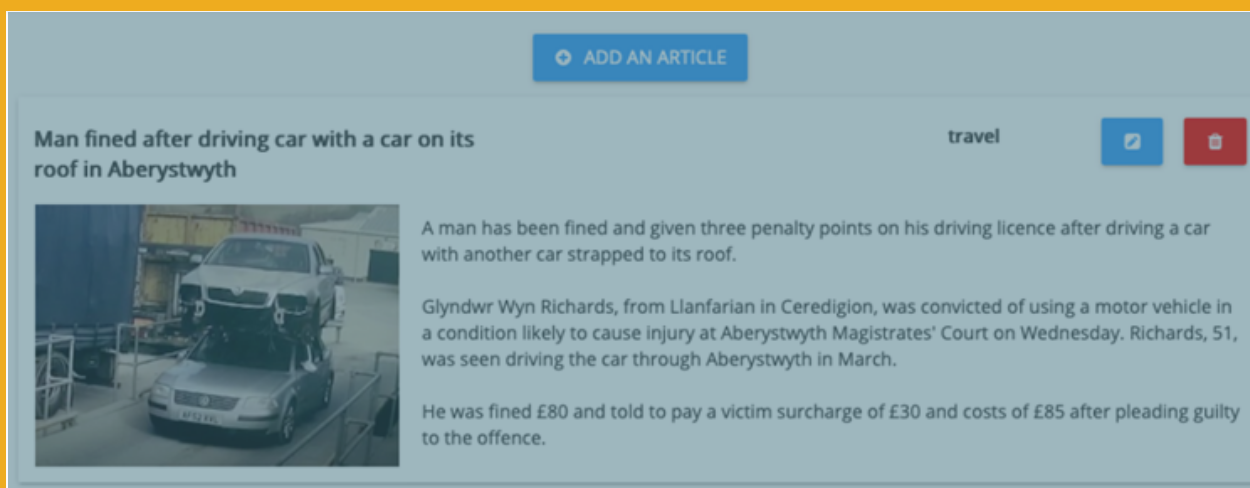

The 'Read' process will look like this:

For each article, there is a detailed view including 'title', 'content', 'category' and 'image'. The Homepage contains a list of articles, displaying a summary of each. When the Homepage is loaded, the list of articles is retrieved from the database. It's also loaded when the articles are added and updated.

CRUD Operations – Update

The 'Update' process will look like this:

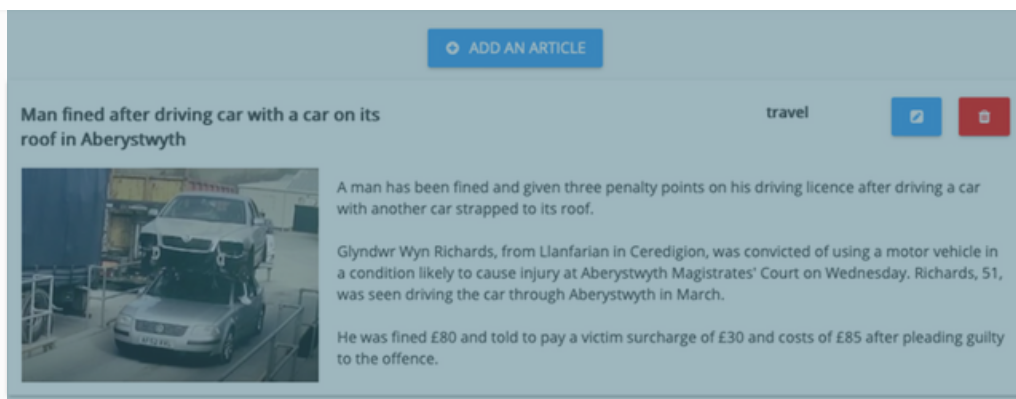

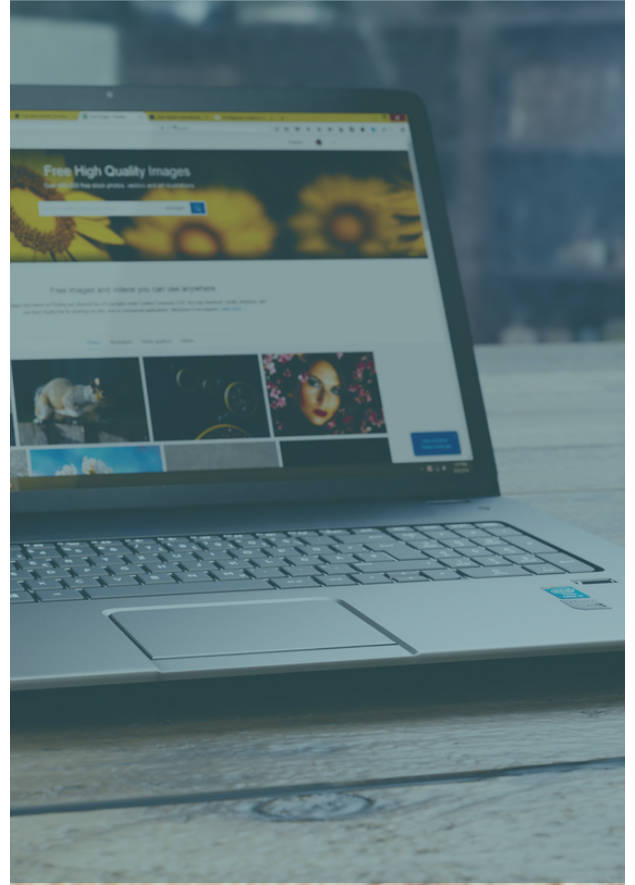

- A popup appears when the user clicks the 'edit' button.
- The popup displays the content of the 'ArticleEdit' Form
- The user makes changes.
- If the user clicks save, we update the article. Otherwise, we discard the article.
- We refresh the Homepage to reflect any updates.

CRUD Operations – Delete

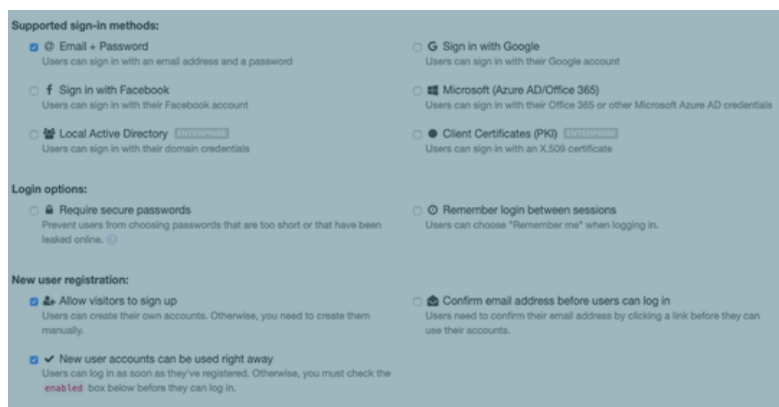

The 'Delete' process is our final step and it will look like this:

- The user clicks the 'Delete' button.
- A popup appears, asking the user to confirm if they wish to delete the selected article.
- If the user clicks 'Yes', we delete the article. Otherwise, we do nothing.
- If the article is deleted, we refresh the Homepage to remove the deleted article.

Users Service

There are various sign-in options included in the Users Service, but only few of them are for free plans. We will change the list of news articles displayed on the Homepage, depending on who is logged into our app.
